Latest

Company	Result	Upgrades	Downgrades	Buy/Hold/Sell	Prev Target	New Target	Brokers
AGL - AGL Energy	MISS	0	0	3/2/0	8.74	8.84	6
AGL Energy posted a substantial miss and the share price was punished accordingly, but brokers are a little more circumspect given the impact of non-recurring plant outages and supply shocks weighing on the wholesale electricity trading business. Gas trading was nonetheless a positive surprise as AGL benefits from contract rollovers. Weak underlying cash flow was mainly caused by temporary factors and brokers expect improvement in the second half. UBS (Buy) continues to see potential for AGL Energy to more than double earnings by FY25, echoing a generally positive sentiment going forward. No ratings downgrades supports this view.							
AQZ - Alliance Aviation Services	MISS	0	0	3/0/0	4.58	4.60	3
A messy set of numbers from Alliance Aviation Services due to accounting changes still left a soft result, although timing issues were also to blame. FY23 guidance was actually a slight upgrade compared to Morgans' forecast, but fell well short of Credit Suisse. While a material increase in wet lease activity and utilisation during the Dec quarter provides a strong trajectory into the second half, the stock is under a takeover offer from Qantas, albeit pending ACCC approval, which is not guaranteed.							
ARF - Arena REIT	IN LINE	1	0	1/1/0	4.08	4.21	2
Arena REIT's first half was sufficiently in line with forecasts and FY guidance is reaffirmed. The ACCC has launched an inquiry into childcare pricing, which may lead to limitations and downside catalysts as the year progresses, but Macquarie is comfortable with the REIT's growth outlook and returns from developments should increase from here. Citing a defensive balance sheet, a solid earnings growth outlook and resilient income, Macquarie upgrades to Buy.							
CLW - Charter Hall Long WALE REIT	IN LINE	0	0	2/2/1	4.64	4.74	5
Charter Hall Long WALE REIT's first half results were in line with forecasts and FY23 operating earnings guidance was maintained. Earnings are benefiting from an increase in CPI versus original expectations as well as profitable							

capital recycling, offset by a higher cost of debt. It is this balance of risks which splits broker views. While the REIT will achieve income growth via CPI-linked leases across some 50% of the portfolio, it will need to contend with a rising cost of capital, particularly in FY25 as the benefit of low rate swaps roll off. Citi (Buy) believes earnings guidance could prove conservative, while UBS (Sell) highlights elevated gearing, low cap rates and poor comparative cash flows.

GDF - Garda Property	IN LINE	0	0	1/0/0	1.98	1.90	1
-----------------------------	----------------	---	---	-------	------	------	---

Morgans does not qualify Garda Property Group's result other than to note FY23 distribution guidance is retained, implying a 5% yield. Looking ahead, the focus remains on the development pipeline with several industrial projects to complete in the near term as well as leasing on the established portfolio and asset sales. Brisbane industrial rental growth is expected to remain strong given lack of supply. Morgans notes the REIT provides exposure to the industrial and office sectors which over the near term will re-weight further to industrial as the current pipeline builds out over the next few years.

MP1 - Megaport	IN LINE	0	0	6/1/0	10.14	9.61	7
-----------------------	----------------	---	---	-------	-------	------	---

Megaport had already broken the bad news with its recent trading update, and copped a share price hiding at the time. Yesterday's result therefore held no surprises. Six Buy ratings from seven are implicit of brokers' focus on the under-valuation of growth potential and not day-to-day volatile share price moves. Management stated the pipeline is solid and the opportunity for growth of customers and revenue remains unchanged. Cash burn should decline in the second half, boosted by lowered capex and inventory requirements. The business might still be impacted by macro headwinds, of course. In the period before new sales rebound, existing customers should continue to purchase more of their telecommunications needs off the company.

MGR - Mirvac Group	MISS	0	1	1/4/0	2.39	2.36	5
---------------------------	-------------	---	---	-------	------	------	---

Mirvac Group's profit was a beat on face value, but a miss after adjusting for one-off items given weakness in residential meeting higher interest expense. FY23 operating earnings guidance is, however, reaffirmed. Mirvac is controlling what it can, as evidenced by robust investment earnings and progress in planned asset sales, but residential and interest rate headwinds will likely persist into FY24. UBS (Hold) nevertheless likes Mirvac's resi exposure, expecting the company can benefit from increasing immigration and a return of international students amid low levels of supply. Credit Suisse suggests value exists for longer-term investors, but believes market sentiment will weigh in the short-term, and downgrades to Hold.

Previous Corporate Results Updates

Company	Result	Upgrades	Downgrades	Buy/Hold/Sell	Prev Target	New Target	Brokers
AMC - Amcor	IN LINE	0	1	0/6/1	17.60	16.86	7

Amcor's result was largely in line with forecasts ex tax and corporate cost impacts. The company maintained its FY23 earnings guidance, but later suggested it expects a result at the lower end of the range. Management was cautious, pointing to weaker consumer demand and pressure from destocking. Amcor posted the weakest volume growth in over three years. The stock is undoubtedly defensive, but not immune from volume weakness resulting in slowing earnings growth over the course of FY23. Morgan Stanley breaks ranks and downgrades to Sell on that basis, but also warns the stock may be left behind in a risk-on trend.

BLD - Boral	BEAT	0	0	1/3/2	3.09	3.73	6
--------------------	-------------	---	---	-------	------	------	---

Boral's result beat most forecasts, with weather seemingly not impacting as badly as feared. Price increase gains were indicative of growing price traction that should be recouping some margin soon, yet inflation pressure and risks remain, with management calling out second-order effects of last year's strong commodity inflation in many key inputs. Sell-raters highlight this headwind, and Citi notes Boral was cycling a very weak prior year of covid-driven construction shutdown. More positive brokers cite upcoming infrastructure spend as supportive. Credit Suisse (Buy)

expects upside to guidance, as margins should improve in the second half on lower energy costs, improved weather and modest growth in end markets.

BWP - BWP Trust	IN LINE	1	0	0/1/2	3.75	3.60	3
CPI-linked leases helped BWP Trust to an in-line result. Brokers appreciate the REIT's strong balance sheet, defensive, growing rental income and low gearing but expect it will struggle to make headway as Bunnings vacates older stores and as interest rates continue to rise. Recent weak rent reviews and poor terms struck on recent developments could be a sign of things to come. Flat FY23 dividend guidance implies capital profits may be used to support dividends. Brokers saw BWP as overpriced relative to peers heading into the result and not much had changed, except Ord Minnet has raised its rating to Hold from Lighten, citing significant investor demand for warehouse properties and the likelihood of a gradual increase in distributions.							
CIP - Centuria Industrial REIT	IN LINE	0	0	1/4/0	3.39	3.40	5
Centuria Industrial REIT reported a flat year on year result, meeting expectations, as higher interest costs offset revenue growth. Strong tenant demand and low vacancy in key markets have led to a positive spread between lease rates on expiring leases and rates on new leases. Occupancy was stable at 98.7%. Operating conditions remain favourable, but concern stems from deteriorating credit metrics amid the rising cost of debt. Macquarie (Hold) believes the fund will continue to enjoy solid fundamentals and that capital recycling could offset debt challenges. Credit Suisse (Buy) highlights the REIT's strong portfolio fundamentals.							
COF - Centuria Office REIT	BEAT	0	0	2/2/0	2.03	1.88	4
Better than anticipated rental income assisted in a first half earnings beat for Centuria Office REIT. The fund generated a better result from leasing, with the group portfolio reflecting an occupancy rate of 96.4%, up from 94.7%. Net tangible asset valuation fell after a -2% fall in valuations for the portfolio as the weighted average cap rate expanded. While Morgans (Add) remains optimistic, potential macro headwinds from more subdued leasing demand and increased supply keeps UBS (Hold) cautious.							
CIA - Champion Iron	MISS	0	0	1/1/0	7.40	7.95	2
Despite reporting a production record in its third quarter, weaker sales volumes and higher costs saw Champion Iron's earnings miss Macquarie's (Hold) expectation. But with higher pricing somewhat offsetting the impact, the result beat Citi (Buy). More positive was the announcement of a feasibility study for the miner's Direct Reduction Pellet Feed project. Cash has already been approved to progress the project ahead of a final investment decision.							
CCP - Credit Corp	MISS	0	0	3/0/0	25.75	25.80	3
While Credit Corp's profit largely met Ord Minnett's forecast, it fell well short of Macquarie and Morgans. FY23 guidance is nonetheless retained, suggesting significant second half improvement is required, although management expects Lending can deliver the majority of the improvement. The near-term performance for the US purchased debt ledger (PDL) and consumer lending segments should drive second half growth, with the A&NZ PDL segment expected to be a drag until supply of PDL books improves. Brokers are prepared to grant management the benefit of the doubt.							
DDH - DDH1	BEAT	0	0	1/0/0	1.10	1.15	1
DDH1's first half revenue was better than Macquarie had forecast, driven by a 24% year on year gain for Swick -- 16% above the broker. With 85% of first half revenue generated from production and resource definition programs, the outlook remains positive, Macquarie suggests, as DDH1 is less exposed to junior activity. The company is working closely with a broad client base and has good visibility of FY23 demand, with clients indicating they intend to execute planned drilling programs.							
DXC - Dexus Convenience Retail REIT	BEAT	0	0	2/0/0	3.49	3.38	2
The first half result for Dexus Convenience Retail REIT was a slight beat compared to Ord Minnett's forecasts.							

Lower than expected debt costs contributed to funds from operations ahead of the broker's estimate. Management has narrowed FY23 earnings and distribution guidance range. Ord Minnett is nevertheless disappointed in slow progress for the REIT's intended asset sales, with rising bond yields hampering the transactional market. Morgans notes additional asset sales were made during the half to pay down debt and the analyst expects further sales, though finds it hard to predict either timing or dollar amounts.

DXI - Dexu Industria REIT	IN LINE	0	0	2/0/0	3.17	3.33	2
----------------------------------	----------------	---	---	-------	------	------	---

While Dexu Industria REIT's first half funds from operations (FFO) were slightly below Macquarie's forecast, the result was driven by costs and tax and FY23 guidance is nevertheless reaffirmed. The broker now sits at the mid-point of the range. Morgans highlights solid rental outcomes during the period, and expects further rental growth with around 14% of leases set to expire over FY24 and FY25, while in Sydney and Perth the development pipeline continues to grow. The REIT's earnings profile is superior to many of its peers, Macquarie suggests, aided by strength in topline growth and developments, with leverage to industrial rental growth.

IGO - IGO	MISS	0	0	4/0/1	15.44	16.82	5
------------------	-------------	---	---	-------	-------	-------	---

IGO's Dec quarter and Dec half results proved mixed, with higher lithium volumes being offset by weaker nickel production. What rattled the market were an increase in operating and capital cost guidance, weaker cash flow generation, a production guidance downgrade at Nova and a six month delay on a final investment decision for Kwinana. All combined led to a sharp share price response and earnings downgrades from brokers. Not everyone was sufficiently pleased with a record dividend. Longer term, brokers remain positive on the EV materials theme. Shorter term, Morgan Stanley keeps its Sell rating due to timing and capex risks for the miner's projects.

JHG - Janus Henderson	BEAT	0	0	0/2/1	30.65	34.67	3
------------------------------	-------------	---	---	-------	-------	-------	---

While Janus Henderson's Dec quarter earnings go down as a (significant) beat, Citi (Sell) suggests the result was of low quality, with the main drivers being performance fees and a slightly lower rate of tax. Net outflows are of an even greater concern, as is a decline in near-term investment performance. Morgan Stanley (Hold) remains concerned by elevated institutional outflows that have continued for several years, despite being a management area of focus.

NCK - Nick Scali	BEAT	0	1	1/1/0	14.17	13.57	2
-------------------------	-------------	---	---	-------	-------	-------	---

Nick Scali's first half profit was ahead of expectations, featuring a higher gross margin percentage and lower operating costs supported by Plush synergies. Written sales orders were down -12.1% in January year on year for the Nick Scali brand but up 22.9% on Jan 2020 (pre-covid). On the downside, customer deposits slowed, which suggests weakening demand, while the dividend disappointed and operating cash flow was nearly half consensus forecasts. No guidance was offered. With the current macro environment of higher interest rates and slowing housing turnover a headwind for furniture retailers, and the order bank support now largely unwound, Macquarie downgrades to Hold.

PNI - Pinnacle Investment Management	MISS	1	0	2/1/1	10.41	9.98	4
---	-------------	---	---	-------	-------	------	---

Pinnacle Investment Management reported underlying earnings below broker expectations. Ongoing funds under management mix changes are nevertheless driving a higher average base fee margin. Ongoing higher base fee margins and increased share of Affiliates net profit have the potential to drive earnings ahead of expectations, while market performance in January should have boosted funds under management. UBS (Sell) highlights that the business model of a more diversified stable of strategies to accommodate differing market conditions is proving more cyclical than anticipated when it comes to generating performance fees.

RGN - Region Group	IN LINE	0	1	1/4/1	2.78	2.77	6
---------------------------	----------------	---	---	-------	------	------	---

Region Group, formerly known as SCA Property Group (SCP), posted a prima facie miss on consensus forecasts but as this was due to timing issues, brokers consider the result in line. Brokers agree the REIT's portfolio of convenience retail centres, anchored by non-discretionary food stores, will prove more defensive in a downturn than large retail formats. But a rise in net property income in the period was wiped out by higher interest costs and this

will continue into the second half. If inflation recedes there will be little relief given only 9% of leases are CPI-Linked. Region's defensiveness keeps Citi on Buy but Macquarie downgrades to Sell due to insufficient interest rate hedging.

RMD - ResMed	BEAT	0	0	5/1/0	36.71	36.23	6
---------------------	-------------	---	---	-------	-------	-------	---

ResMed's second quarter revenue soundly beat all forecasts, offset to some extent by higher costs and operating expenses impacting on margins. Americas sleep/respiratory sales rose strongly, underpinned by strong device and mask sales, while the rest of the world performed evenly despite ongoing supply constraints. Credit Suisse (Buy) suggests management's outlook commentary on supply issues was the most upbeat since the Philips recall, with all demand by the end of 2023 expected to be met. The company is increasingly focused on sales of its cloud-connected devices, while market share gains remain dependent on the timing of Philips' revival.

SUN - Suncorp Group	IN LINE	0	0	6/1/0	14.09	14.51	7
----------------------------	----------------	---	---	-------	-------	-------	---

Suncorp's result scored a couple of misses, but mostly in-lines, and no downgrades have been forthcoming. Claims costs rose, reflecting higher second-hand car and parts prices, wage inflation and natural hazard costs but premium increases combined with lower operational expenditure, an uptick in investment income, and rising net interest margins for the bank division won the day, the latter supporting the upcoming sale. Strong price rises remain supportive of near-term margins and the bankinsurer appears well positioned for when inflation and bad weather ease. That said, six Buy ratings reflect a valuation discount more so than strong views on the insurance business.

TCL - Transurban Group	IN LINE	0	1	2/2/2	13.81	13.87	6
-------------------------------	----------------	---	---	-------	-------	-------	---

Given Transurban's broker ratings are split 2/2/2 it is of little surprise brokers reported misses, meets and beats from the company's result, although meets won in the end. There was nevertheless some distortion from the 50% sale of the A25. A better traffic and lower interest cost performance have led to an increase in FY23 dividend guidance to 57c from 53c. The traffic outlook is encouraging, given the WestConnex is to ramp up over the next 18 months with the Rozelle interchange, and the development pipeline near term is attractive. Credit Suisse (downgrade to Sell) nevertheless sees valuation as elevated, and has actually cut its dividend forecasts.
